Press Release

Making a Good Encoder Even Better – More Resolutions

FOR IMMEDIATE RELEASE

SANDPOINT, IDAHO, December 31, 2002:

Encoder Products Company (EPC), manufacturer of the popular Accu-Coder™ brand of encoders, has made one of the most versatile members of its **Accu-Coder™ Cube Series**, the **Model 715**, even more flexible by dramatically extending its range of available resolutions. Simply put, this means that you can now order a **Model 715** in nearly any resolution from 1 to 10,000!!

The **Model 715 Bi-directional Encoder** is a very flexible member of the Cube Series Accu-Coder that operates in one of two modes.

In the first mode (**Model 715-1**), it provides a constant pulse width output on one output channel for clockwise shaft rotation, and on another channel for counterclockwise rotation. In the second mode (**Model 715-2**), the constant pulse width output is on one channel regardless of the direction of shaft rotation. Another channel is a direction line indicator that outputs a logic level “1” for clockwise shaft rotation, and a logic level “0” for counterclockwise rotation. Making the **Model 715** even more versatile is the fact that the pulse width itself is programmable from 10 microseconds to 100 milliseconds. In addition, the **Model 715** can be ordered with shaft sizes from 0.250” to 0.625”.

The **Model 755A** is manufactured to EPC’s exacting standards to ensure the quality you’ve come to expect from the Accu-Coder™ brand. And with EPC’s exclusive three-year warranty, you can be confident your Accu-Coder™ will provide years of trouble free use.

For additional information contact EPC, PO Box 1548, Sandpoint, ID 83864, 800-366-5412, www.encoder.com.
