Press Release

US BUILT METRIC ENCODER IS A FAST AND
RELIABLE ALTERNATIVE

FOR IMMEDIATE RELEASE

SANDPOINT, IDAHO, OCTOBER 2, 2001: The Model 758 Round Series Accu-Coder™ from Encoder Products Company (EPC) is an industry standard European size 58 (58mm) optical shaft encoder with a twist. Manufactured in the United States, the Model 758, a direct replacement for size 58 encoders common on many European built machines, can be shipped with exceptionally shorter lead times than its European counterpart, saving you costly downtime. In addition, unlike any other size 58 on the market, the Model 758 Accu-Coder™ features EPC's innovative sensing technology to provide accurate and reliable resolutions to 30,000 CPR (120,000 counts in full quadrature). The Model 758 is specifically designed for harsh factory and plant floor environments and incorporates double shielded ball bearings to provide a maximum axial and radial shaft load of 80 lbs.

With its rugged construction and short lead times you can be confident that the Model 758 Round Series Accu-Coder™ will get you running fast and will keep you running for years to come.

For additional information contact EPC, PO Box 1548, Sandpoint, ID 83864, 800-366-5412, www.encoderproducts.com.
